Early Childhood Education and Care (ECEC) &

The Welfare of Nations

Edward Melhuish

University of Oxford

edward.melhuish@education.ox.ac.uk

Why Focus on Early Childhood?

- "If the race is already halfway run even before children begin school, then we clearly need to examine what happens in the earliest years." (Esping-Andersen, 2005)
- "Like it or not, the most important mental and behavioural patterns, once established, are difficult to change once children enter school." (Heckman & Wax, 2004).

The impact of social origins upon well-being is persistent.

Early experience is critical in this link.

Two arguments for investing in early childhood.

- 1. Moral moral duty to optimise wellbeing where we can.
- 2. Economic we all benefit in the long-term

Europe 2050: working population will decrease by 50 million while elderly grow by 50%.

Economic sustainability will require maximizing the capacity of the workforce.

Skills for good outcomes are rising & changing, and there is still great inequality of opportunity.

Both cognitive and non-cognitive skills are critical. How can these be improved?

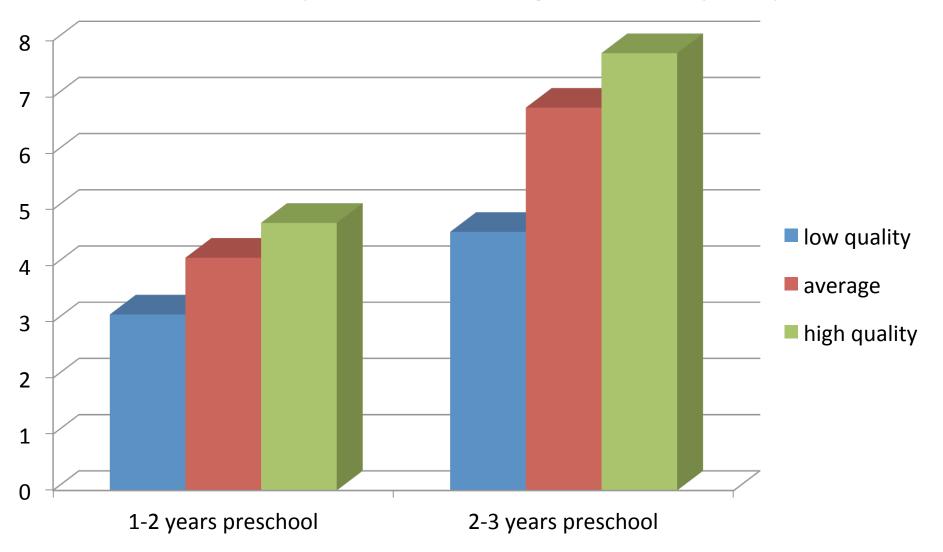

OECD 2012: Across OECD, 20% do not achieve basic minimum skills. The problem is twice as great for disadvantaged groups.

Disadvantaged groups have greater risk:

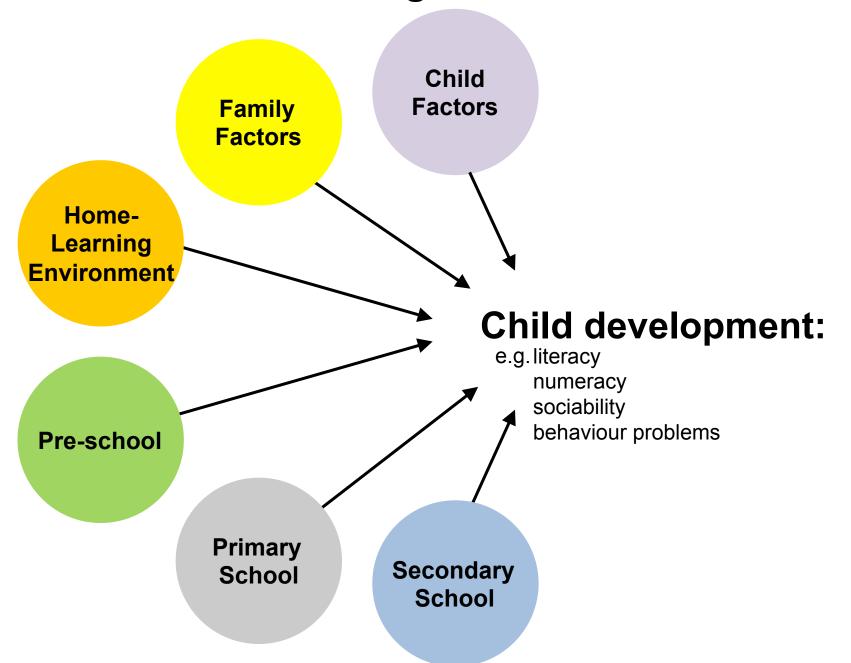

- for poor health
- Social, emotional, behavioural problems
- Attention, cognitive and language problems
- Affects educational progress, literacy, numeracy, social skills, employability, health, adjustment and criminality.

ENGLAND - EPPSE longitudinal study - 3000+ children Quality and Duration matter

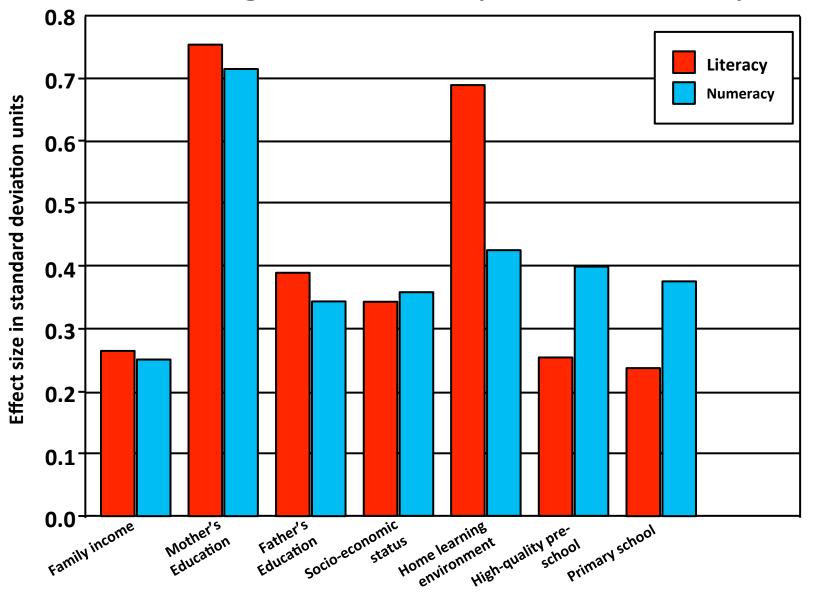

months of developmental advantage on literacy – 5 year olds

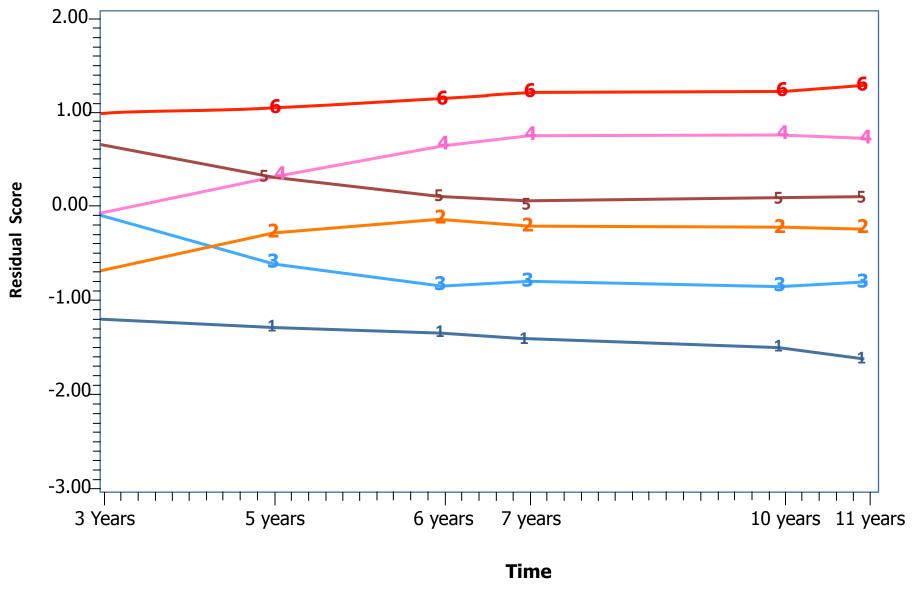

Modelling later outcomes

Effects at Age 11; literacy and numeracy

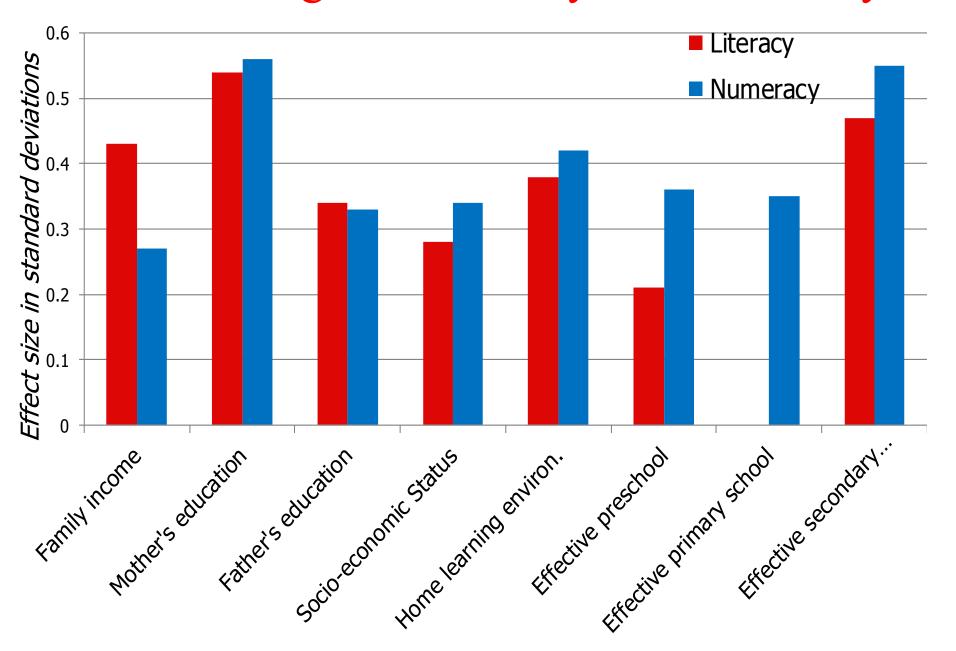

Trajectories for Numeracy

Group % 111 8.2% 22 219.6% 3 3 318.8% 4 4 417.3% 5 5 5 23.2% 6 6 612.9 %

Effects at Age 16: Literacy and Numeracy

Conclusions

- From age 2 all children benefit from preschool.
- The quality of preschool matters.
- Part-time has equal benefit to full-time.
- Preschool effects persist until teenage years
- High quality preschool can protect a child from effects of a low effective school.
- Primary school effects are more persistent for numeracy.
- Secondary school effects are strong

Policy Impact in the UK

- 2004 Free ECEC place from 3 years 15hours/week
- 2013 -Free ECEC place from 2 years -15hours/week
 (40% most deprived)
- 2017 15 hours/week increases to 30 hours/week
- Maternity leave increased to 1 year
- New Early Years curriculum
- New training programs for EY staff
- Acceptance that EY is part of state responsibilities

International evidence

Evidence is consistent - ECEC is essential part of infrastructure for optimising global wellbeing.

USA – pre-school improves educational attainment, particularly for disadvantaged

NORWAY, FRANCE, SWITZERLAND – population studies – all preschool increased education, employment, incomes.

DENMARK – high quality preschool- better 16 years outcomes

NORTHERN IRELAND - high quality preschool increased grades in English X 2.4 and math X 3.4.

USA- Age 5 Reading by pre-school quality: 12,800 children

- Comparison with no pre-school (Magnusson et al 2003)

| | READING | | | | |
|------------------------------|---------|---------|------------------------|--|--|
| | ALL | Poverty | Low Mother Educ. | | |
| Pre-school (High Quality) | 1.66** | 2.23** | 3.44** | | |
| Pre-school (Low Quality) | 1.34** | 1.48* | 1.21 | | |

In Norway, free preschool available to children aged 3 years during the 1960's and 1970's — huge increase in preschool attendance.

- Analysis showed children attending preschool:
- 1. had higher educational levels and
- 2. better job outcomes later in life.
- 3. higher income in later life

- In France, preschool expanded in 1970's
- huge increase in preschool attendance.
- Analysis showed preschool:
- 1. leads to higher income in later life
- 2. reduces socio-economic inequalities children from less advantaged backgrounds benefit more.

Switzerland has also expanded preschool.

- -Improved intergenerational education mobility
- -especially beneficial for disadvantaged children

Denmark

Bauchmüller, Gørtz and Rasmussen (2011)

http://www.cser.dk/fileadmin/www.cser.dk/wp_008_rbmgawr.pdf

Danish register data on whole population

5 quality indicators of preschool:

- 1) the staff-to-child ratio
- 2) the share of male staff in the preschool,
- 3) % of pedagogically trained staff
- 4) % of non-native staff,
- 5) the stability of the staff (staff turnover).

Controlling for background factors, **better preschool quality** linked to better test results in 9th grade.

"the fact that we find long-lasting effects of pre-school even after 10 years of schooling is quite remarkable"

NORTHERN IRELAND

EFFECTIVE PRE-SCHOOL PROVISION IN NORTHERN IRELAND (EPPNI)

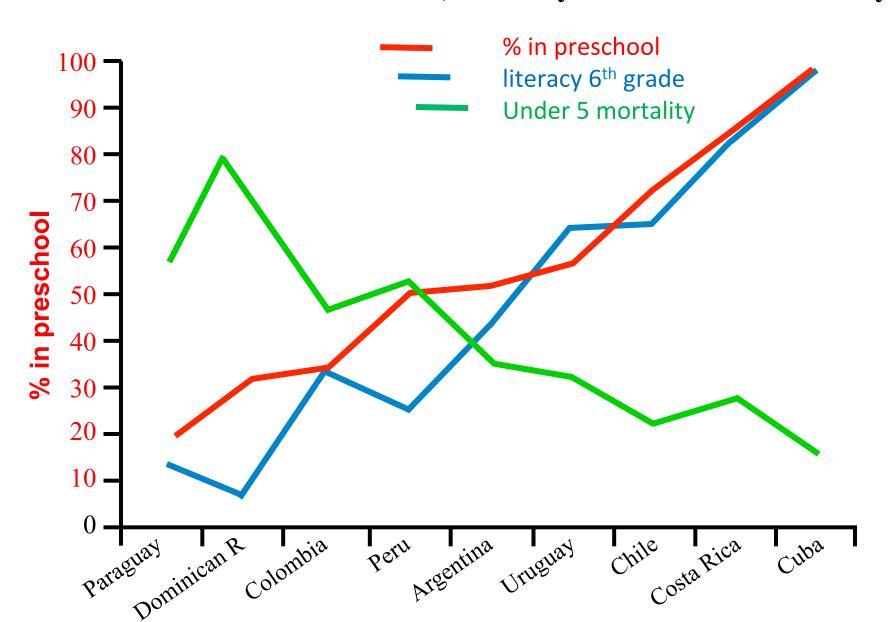

- 850 children followed up to 11 years of age. Similar results to EPPE in England.
- At age 11, allowing for all background factors, The effects of quality of pre-school persist until age 11 years
- High quality pre-school improved English and maths, And improved progress in maths during primary school.
- Children who attended high quality pre-schools were 2.4 times more likely in English, and 3.4 times more likely in mathematics, to attain the highest grade at age 11 than children without pre-school.

Benefits of preschool have also been evident in **Asia** and **South America**.

- In **Bangladesh**, children attending preschool achieved higher attainment levels at primary school.
- **Uruguay** has followed suit studies identified better attainment in secondary school for children who attended preschool.
- Argentina found increases in primary school attainment from children who spent at least 1 year in preschool.

Latin America

Association between Preschool, Literacy and Under 5 Mortality

PISA results for 2009

Across OECD countries, 15-year-olds who attended preschool were, on average, a year ahead of those who had not.

"The bottom line: Widening access to pre-primary education can improve both overall performance and equity by reducing socio-economic disparities among students, if extending coverage does not compromise quality."

OECD (2011). Pisa in Focus 2011/1: Does participation in pre-primary education translate into better learning outcomes at school?. Paris: OECD. Available at

www.pisa.oecd.org.dataoecd/37/0/47034256.pdf

Gains from ECEC

Education and Social Adjustment

- Educational Achievement improved
- Special education and grade repetition reduced
- Behaviour problems, delinquency and crime reduced
- Employment, earnings, and welfare dependency improved
- Smoking, drug use, depression reduced

Decreased Costs to Government

- Schooling costs
- Social services costs
- Crime costs
- Health care costs

Cost: Benefits - 1:2 to 1:4 general population

LESSONS

- 1. Early years are very important
- 2.Preschool is part of infrastructure for a successful society
- 3. High quality preschool boosts development
- 4. Parenting is also very important
- 5. Preschool lifts population curve.
